

**VarioFold Compact: offline becomes online at any time**

## **ROWE presents the first completely modular folding system in the world**

**Once you were offline, always offline – up to now that was the case as far as folding machines were concerned. With the new patented ROWE VarioFold Compact things have changed. Why? It can be extended from offline to online with minimum outlay, even after it has already been put into operation. For this the VarioFold Compact is compatible with all standard wide format printers. This guarantees the user maximum security for his investment. Thanks to the PREMIUM MANUAL FEED the VarioFold Compact remains a complete offline folding system even in online configuration. Another highlight: the VarioFold Compact Online isn't any more expensive than a standard offline folding system.**

“Patented endless folding, height adjustment that's easy on your back or easy extension to an online folding system – never before has there been such versatility. The system is also extraordinarily quiet during operation. We've already had a lot of positive feedback from our customers concerning this”, explains Johannes Roth, Managing Partner of ROWE. Modular construction according to the principles of modular design enables this degree of flexibility in its configuration. Users can select a number of options which enable them to configure a folding system that exactly meets their requirements: they can select output trays at the back or front which can hold various capacities. ROWE offers various apps and kits for setting up individual folding programs and for folding maps and letter formats and even extra-long documents. If the volume increases the VarioFold Compact can be extended to an online folding system. For this it is compatible with all standard wide format printers. Especially clever: the PREMIUM MANUAL FEED ensures the VarioFold Compact remains a complete offline folding system even in online configuration. Due to its compact dimensions the VarioFold Compact is easy to integrate into any office environment. For users wanting to fold automatically, even in a restricted space, ROWE offers the VarioFold Compact with Tablestand – an extremely space saving stand for operation of the folding system on any office table.

When developing the new folding system ROWE paid special attention to maximum user-friendly ergonomics: this is why the VarioFold Compact is equipped with a Floorstand with back-friendly height adjustment so the operating height can be adjusted according to the height of the user, as well as a feed table with non-stick coating for optimal paper handling. The technologically advanced interaction of micro-controllers with state-of-the-art step motors, patented holding rollers and the torsion resistant aluminium spaceframe construction guarantees maximum folding quality as well as quiet folding.
